

1

Chris has just bought an Instant Pot and is excited to use it to make an efficient, delicious meal.

2

He places the lid on the pot, pushes the "Pressure Cook" button, and inputs his desired cooking time.

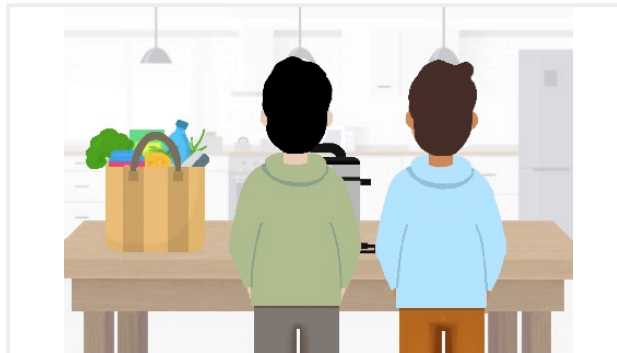

3

Chris searches for a 'start' button since the display only says "On"; he is not confident that the cooking process has been initiated.

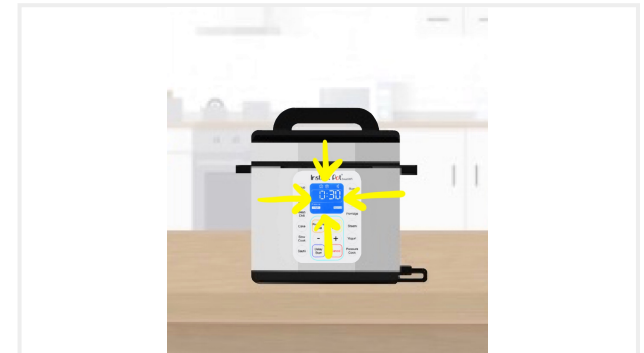

4

Worried that he may have started the cooking process incorrectly, he presses "Cancel" and tries selecting different sequences of buttons, but to no avail.

5

Chris becomes frustrated and asks his flatmates for help.

6

Chris gives up, repeats his original button sequence, and leaves the Instant Pot alone for several minutes; soon the "On" display is replaced with the cooking time, and Chris suspects he has used the device correctly.

7

After a lot of assumptions and trial-and-error Chris has successfully used the Instant Pot, but he does not forget his confusion about the lack of a start button and clear communication from the device.
